

## **Personal Assistance for Seniors Who Are Self-Reliant**

### **PROBLEM STATEMENT**

The problem statement is too many medications with different timing are hard to keep track of and Drug names are too complex to remember clearly. Due to Vision problems elders are not being able to read the small labels on medicine bottles. Language are not able to read well in English. To overcome this creating a simple web application that will send the medicine name to the IoT device at the desired time. All the medicine details will be stored in the IBM Cloudant DB. After getting the medicine name the device will speak out the medicine name using IBM text to speech Service to intimate the user to take the medicine in desired time.
